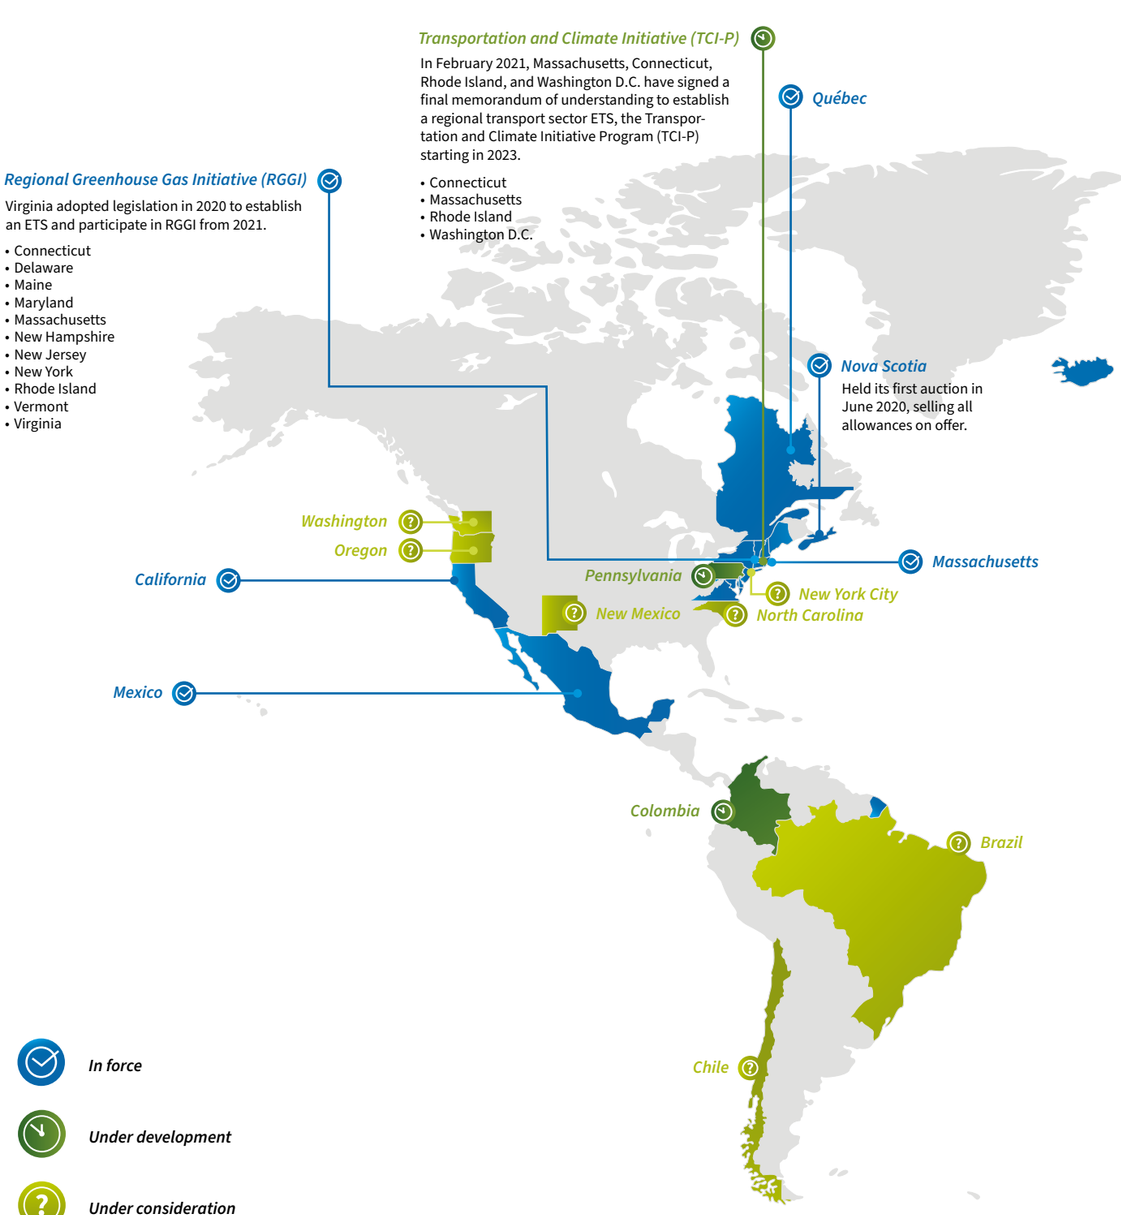
EMISSIONS TRADING WORLDWIDE

The state of play of cap-and-trade in 2021


The ICAP ETS world map depicts emissions trading systems currently in force, under development or under consideration. As of 31 January 2021, there are 24 ETS in force. Another eight are under development and expected to be in operation in the next few years. These include ETS in Colombia and the Transportation and Climate Initiative Program (TCI-P) in northeastern US States. 14 jurisdictions including Chile, Turkey and Pakistan are also considering the role an ETS can play in their climate change policy mix. If a jurisdiction has multiple systems in force or has a system in force but is at the same time developing or considering an additional system, it is depicted in blue.
