General Information

<p>Summary</p>	<p>Status: ETS under consideration</p> <p>Jurisdictions: Japan</p> <p>In March 2017, the Global Environment Committee of the Central Environment Council of Japan formulated the "Long-term Low-carbon Vision" of the country. The document refers to carbon pricing as essential to decarbonize the society. Based on that discussion, in March 2018 an expert committee on carbon pricing released a study assessing how carbon pricing could help Japan achieve long-term, substantial emissions reductions, as well as solve economic and social issues. In June 2018, a deliberative council—the "Subcommittee on Utilization of Carbon Pricing, Global Environmental Subcommittee, Central Environment Council"—was set up to consider how carbon pricing can encourage Japan to make the transition to a decarbonized society and to achieve economic growth. Both industry groups and academic experts participated in the council; discussions are still ongoing.</p> <p>In parallel, Japan operates the Advanced Technologies Promotion Subsidy Scheme with Emission Reduction Targets program, which functions as a voluntary cap-and-trade program. Entities establish a reduction target based on historical emissions and propose new technologies to implement in order to reach these targets.</p> <p>Japan is also implementing the Joint Crediting Mechanism, a bilateral offset crediting mechanism to incentivize low-carbon technologies in developing countries.</p>
